WALIA GLOBAL VENTURES

# Patterned Glass

## Description

Unlike clear float glass, patterned glass is a figured type in which is not easy to see the objects from the other side due to the presence of figures on the surface. It is usually used to provide more private spaces within the building area. Patterned glass can be produced with existing and customized-base figures.

## Features

Due to the uneven surface on one side, patterned glass causes disordered light refraction and makes the objects not to be seen clearly from the other side. Depth, size and shape of the figures on the surface of the glass significantly affects the measure and direction of reflected light. Some of the most important features of patterned glass are high light transmittance, lack of wave, scratch, bubble and being able to be cut in different sizes upon customer's order.

## Applications

Having diverse designs and colors has made this type of glass very desirable in different applications. Some of the applications include decorations, partitions, glass doors, elevator doors, ceiling skylights, glass tables, greenhouse structure and the facades of residential or commercial buildings.

## Quality Standards

Top quality glass complies with CE / BS EN 572(Europe standard) and ISI mark as per indian standard.

## Specifications

<b>Thickness</b>	3-10mm
<b>Size</b>	1200/1300/1400/1500 × 1800/2000/2200mm
<b>Color</b>	Clear, Bronze, Blue, Green, Gray
<b>Pattern</b>	Flora, Sandy, Karatachi, Withy, Magnifier, Hammered, Wired, Atlasi, Hasiri, Shaparaki, Windy, Fish, Digital, Kerezit, Ice, Cloudy
